You Bring the Culture, We Bring the Technology

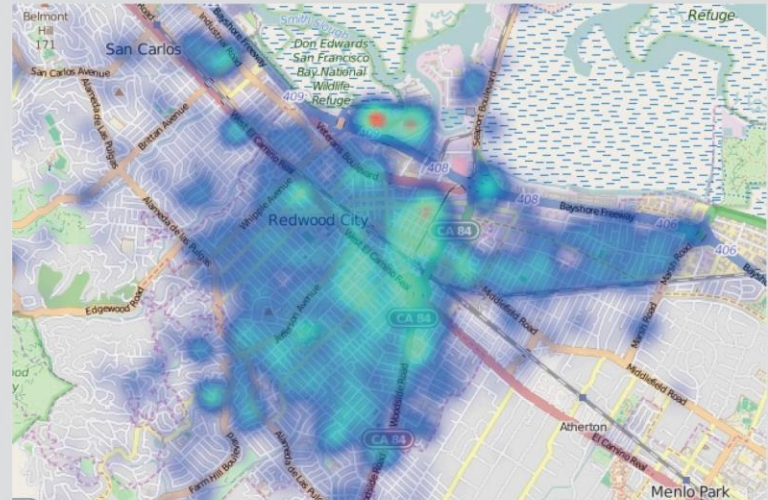

Are you coming or going?

Derek Gottlieb for Lane Motor Museum

The picture above depicts a reproduction of a rather unique solution created in southern France in the early 1950's. The problem: narrow mountain roads and an inability to turn around. The solution: create a car that can be driven from either end. The original car was in-service until the early 1970's. We salute -- and support -- the innovative, can-do spirit of the fire service worldwide!

What is your data telling you?

This image shows projected incident growth rates in a dense Bay Area city, generated by Code3 Visionary technology. It is based on observed trends from the past 10 years, anticipated changes in causal factors such as population, demographics, employment, zoning and transportation; and specific planned new developments. Code3 Visionary enables detailed, scenario-based projections for deployment analysis and impact fee assessment.

Situational Awareness: Understanding what's going on, and how we're performing.
